

PRODUCT DATA - CARBON FIBER AND ALUMINUM HONEYCOMB PANEL S1-F1-M1-C1

Panel Areal Weight	127+/-2 g/ft ²
Total Thickness	0.275" +/- 0.005"
Flatness	+/-0.005
Temperature Capability	300°F

SKIN

Total Thickness	0.011" +/- 0.001"
Material	Aerospace Grade AS4 3K Carbon Fiber 2x2 Twill Weave 0.009" Thick Aerospace Grade E-Glass Fiberglass Plain Weave 0.002" Thick***
Resin Content	37% by weight
Finish	Flat Gloss
Skin Bond to Core Fillet Radius	0.015"

***A thin layer of fiberglass is incorporated in the panel construction to electrically isolate the aluminum core from the carbon fiber skin and prevent galvanic corrosion.

MATRIX

Material	Thermoset Epoxy
Tg	312°F
Tensile Strength	12,600 psi
Compressive Strength	16,700 psi
Flexural Strength	14,500 psi
Tensile Elongation	4.1%
Flexural Elongation	5.0%
Hardness	87 Shore D
Density	9.22 lbs/gallon

CORE

Material	Aerospace Grade 5056 Aluminum
Thickness	0.250" +/- 0.005"
Cell Size	0.125" +/-0.13"
Cell Wall Thickness	0.0007"
Density	3.1+/-0.3 lbs/ft ³
Bare Compressive Strength	340 psi
Compressive Modulus	97,000 psi
L- Shear Strength	250 psi
L-shear modulus	45,000 psi
W- Shear Strength	155 psi
W-shear modulus	20,000 psi
